

Jordan Chen

OBJECTIVE

Computer Science new graduate from the University of Washington seeking a full-time Software Engineer role. Experienced in backend development and machine learning through two internships and hands-on academic projects. Eager to contribute to a collaborative engineering team and grow as a generalist engineer.

EDUCATION

Bachelor of Science in Computer Science

Jun 2025

University of Washington — Seattle, WA — GPA: 3.6 / 4.0

Relevant Coursework: Data Structures & Algorithms, Systems Programming, Machine Learning, Databases, Software Engineering

INTERNSHIP EXPERIENCE

Software Engineering Intern

Jun 2024 – Sep 2024

Amazon Web Services (AWS) — Seattle, WA

- Built a serverless data validation pipeline using AWS Lambda, S3, and SQS that processes 50K+ records daily for an internal compliance team.
- Reduced cold-start latency of Lambda functions by 35% by migrating from Python 3.9 to a custom runtime with pre-warmed execution contexts.
- Delivered a working prototype within 10 weeks and presented results to a 20-person stakeholder review; feature shipped to production.
- Wrote technical design document and unit tests with 88% coverage using pytest.

Software Engineering Intern

Jun 2023 – Aug 2023

Redfin Corporation — Seattle, WA

- Contributed to the home-search recommendation engine by adding a new user-preference weighting model, improving click-through rate by 8% in A/B testing.
- Fixed 12 backend bugs in the listings ingestion service (Java / Spring Boot) and added regression tests for each.
- Participated in daily standups, sprint planning, and code reviews within an Agile team of 8 engineers.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript / TypeScript, C, SQL, Bash

Frameworks & Libraries: FastAPI, Spring Boot, React, Node.js, NumPy, pandas, scikit-learn, pytest

Cloud & Tools: AWS (Lambda, S3, SQS, EC2), Docker, Git, GitHub Actions, Postman, Linux

Databases: PostgreSQL, MySQL, MongoDB, Redis

PROJECTS

CampusEats — Full-Stack Web App (github.com/jordanchen/campuseats)

Food ordering platform for university dining halls built with React, FastAPI, and PostgreSQL. Implemented JWT-based authentication, real-time order status via WebSockets, and an admin dashboard for menu management. Deployed on a DigitalOcean VPS with Nginx reverse proxy. Used by 200+ students during pilot testing.

CourseRank — ML Recommendation System (github.com/jordanchen/courserank)

Collaborative-filtering course recommender trained on 3 years of anonymized UW enrollment data (80K rows). Achieved 0.81 NDCG@10 using matrix factorization (ALS) vs. 0.67 for a popularity baseline. Built an interactive Streamlit demo;

final project for CSE 547 Machine Learning for Big Data.

ThreadPool OS Project — Systems Programming

Implemented a user-space thread library and work-stealing thread pool in C as part of CSE 451 Operating Systems. Supported mutex locks, condition variables, and dynamic resizing. Benchmarked 2.3× speedup over single-threaded baseline on a 4-core machine.
